NATIONAL D'HISTOIRE NATURELLE

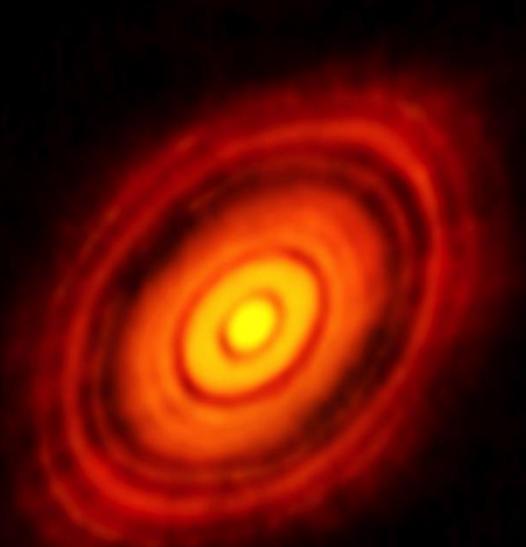

Why study
météorites ?

They are space probe...

... and time probe !

Protoplanetary disk of star HL

W. K. Hartmann

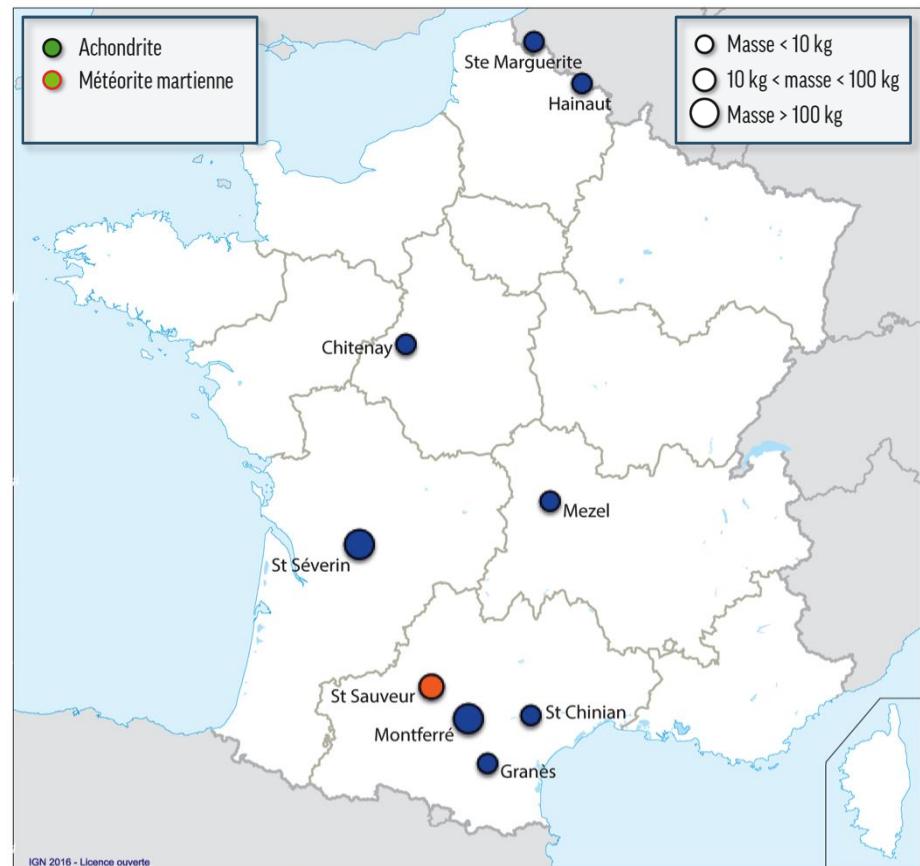

Fripón and VIGIE-CIEL to solve the recovery of fresh meteorites

Meteorite falls recovered in France : loss of efficiency in the 20th century

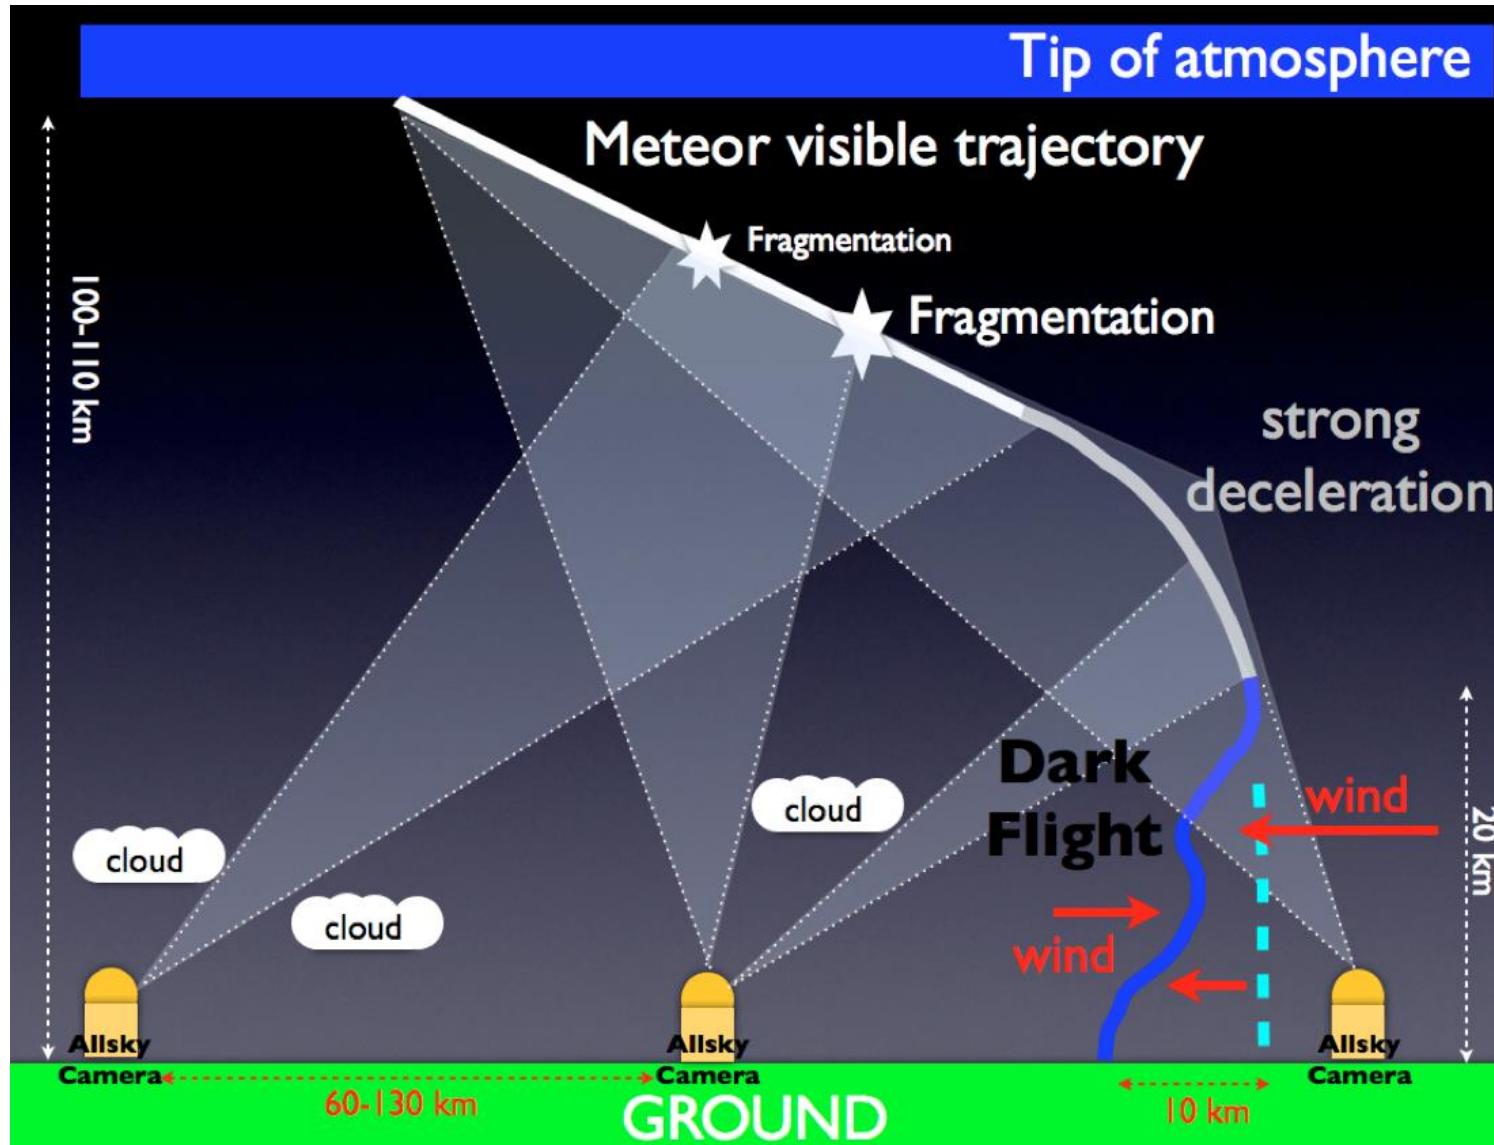

XIXth century : 45 meteorites.

XXth century : 9 meteorites.

The goals of VIGIE-CIEL

Vigie-Ciel : citizen science program

- ⇒ Recovering freshly fallen meteorites
- ⇒ Replace them as science objects (to keep/study)
- ⇒ Collect data to study the impact flow of extraterrestrial matter on Earth by involving the general public in several citizens programs (meteors, meteorites, impact craters)
- ⇒ Improve knowledge, including:
 - learn to recognize shooting stars, fireballs, meteorites and impact craters and their scientific interest
 - learn to report observations
 - and, for those who will go out in the field, learn to handle meteorites and know the legal aspects of the quest

The goals of VIGIE-CIEL

But also ...

- ⇒ Build a strong human network that supports and relays the project
- ⇒ Have a wide diversity of partners
- ⇒ Promoting interdisciplinarity
- ⇒ Involve various audiences in the research project to increase results
- ⇒ Facilitate communication with the general public and promote the network's visibility in the media

VIGIE-CIEL : 3 PROTOCOLS

Fireballs

Meteorites

Impact craters

Sporadic phenomena

Transform an observation into a participation work with the AMS (American Meteoritical Society).

Mobilize and lead a community of actors likely to mobilize an operational local community in a short period of time.

Collaborative analysis of topographic images of the Earth to identify potential impact structures

Report a Fireball

Events

Reports

Statistics

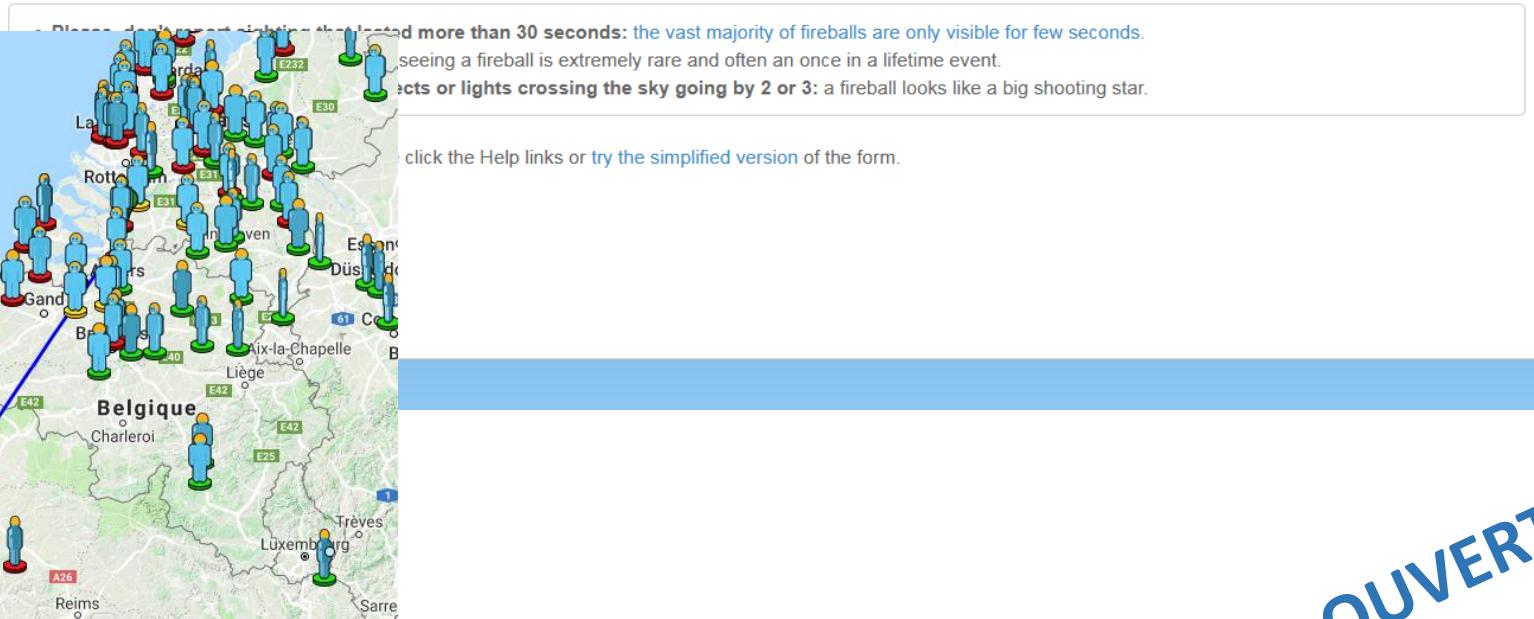

English ▾

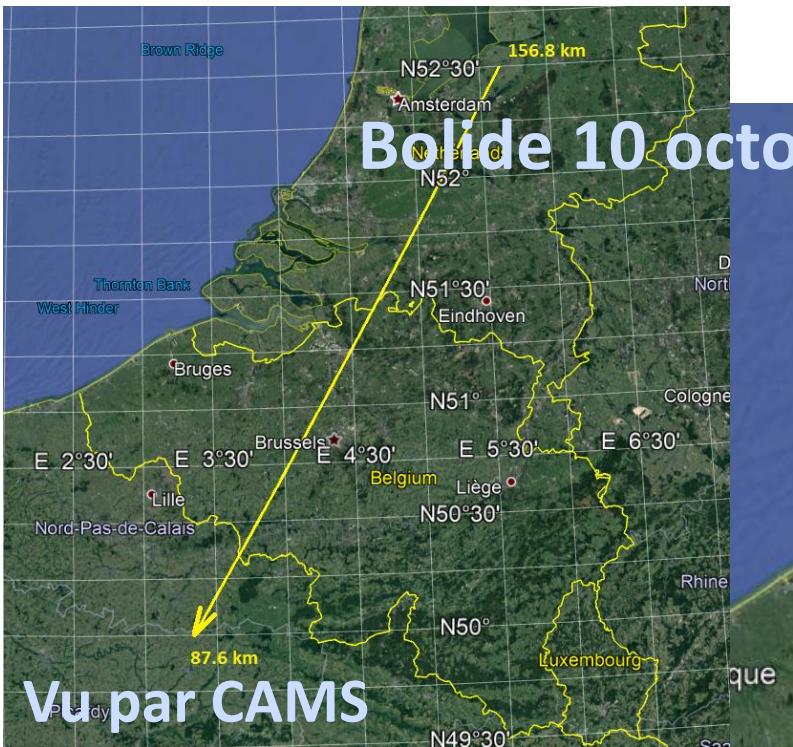

Report a Fireball: it's fun and easy!

You saw something bright and fast? Like a huge shooting star? Report it: it may be a fireball.

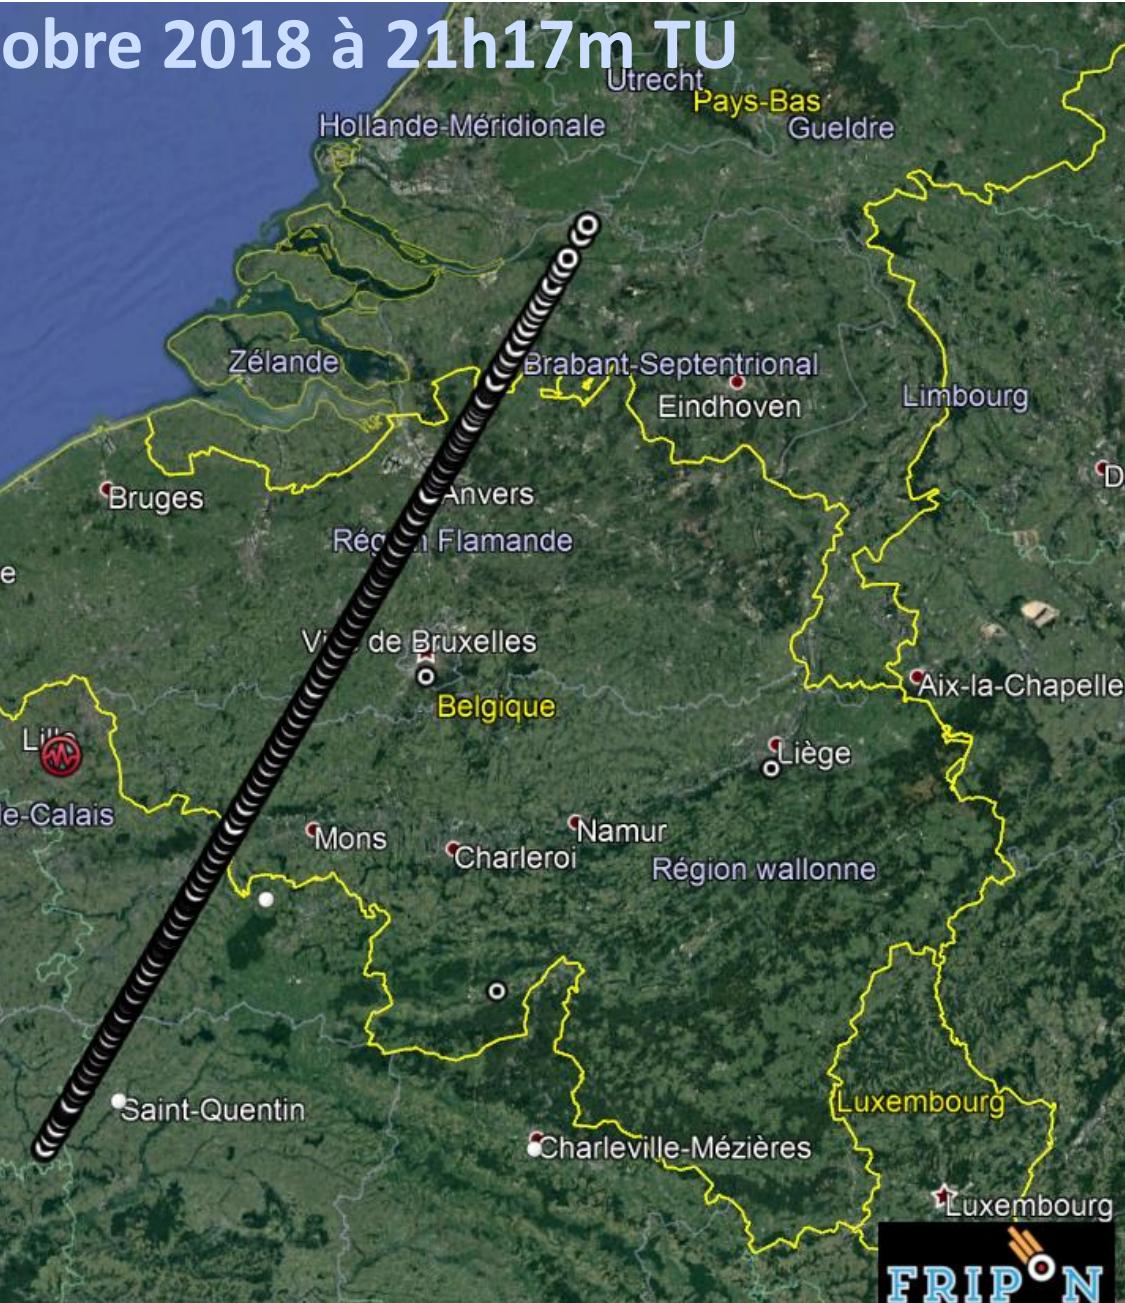

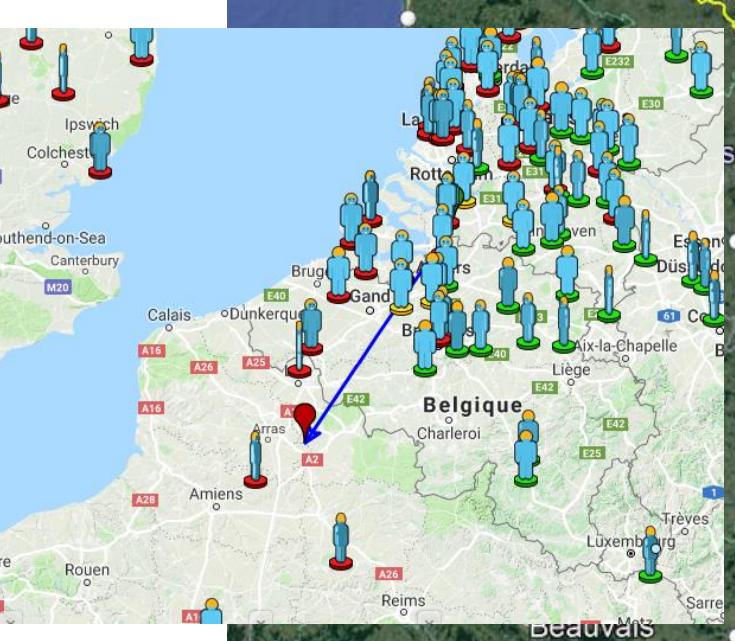

We are going to ask you to fill an interactive form that is intended to be easy to fill out for anyone. Please, be as precise as you can. Your report is important, it alerts us to potentially scientifically significant events that occur, and contributes to the general database of knowledge about meteors. You will have the opportunity to give us all the details about your sighting experience at the end of the form.

 FRIPO^N

1/ Fireballs

Goals of Vigie-Ciel

- ⇒ Alert in case of an important event
- ⇒ Communicate with witnesses to explain the phenomenon
- ⇒ Characterize the fireball in addition to the cameras (color, sound...)
- ⇒ Mobilize the general public around the event

 Plusieurs témoins du côté de l'Italie , n'hésitez ps à témoigner sur vigue-ciel.imo.net pour aider à mieux caractériser le bolide ; on n'a rien du côté des caméras FRIPON, il faisait encore jour.

 **Vigie-Ciel Signalez un bolide : c'est facile et amusant**
Vous avez vu quelque chose de brillant et rapide dans le ciel ? Comme une très grosse étoile filante ? Partagez votre observation avec nous : c'est peut-être vigue-ciel.imo.net

Flyer for public

¿CÓMO SABER
SI HAS
ENCONTRADO
UN METEORITO?

Muchos testigos vieron un bólido (gran estrella fugaz) en el cielo del País Vasco y Navarra el 22 de diciembre de 2018.

El fenómeno luminoso

Si se encuentra en esta región, nuestros equipos pueden contactarlo para cuscárolo.

Si ha encontrado una roca que parece un meteorito, contáctenos.

3/ Identification of impact craters

<http://www.vigie-crater.org/>

The screenshot shows the Vigie Cratères website interface. At the top left are the French and British flags. The title "Vigie Cratères" is displayed with a stylized "C" that looks like a comet. A blue box on the left contains information about a detected structure:

- Structure n°128** (with a magnifying glass icon)
- Détectée par **Petit_lapin**
- Latitude: $51^{\circ}32'01''N$
- Longitude: $2^{\circ}23'03''E$
- Diamètre: 0.34 km

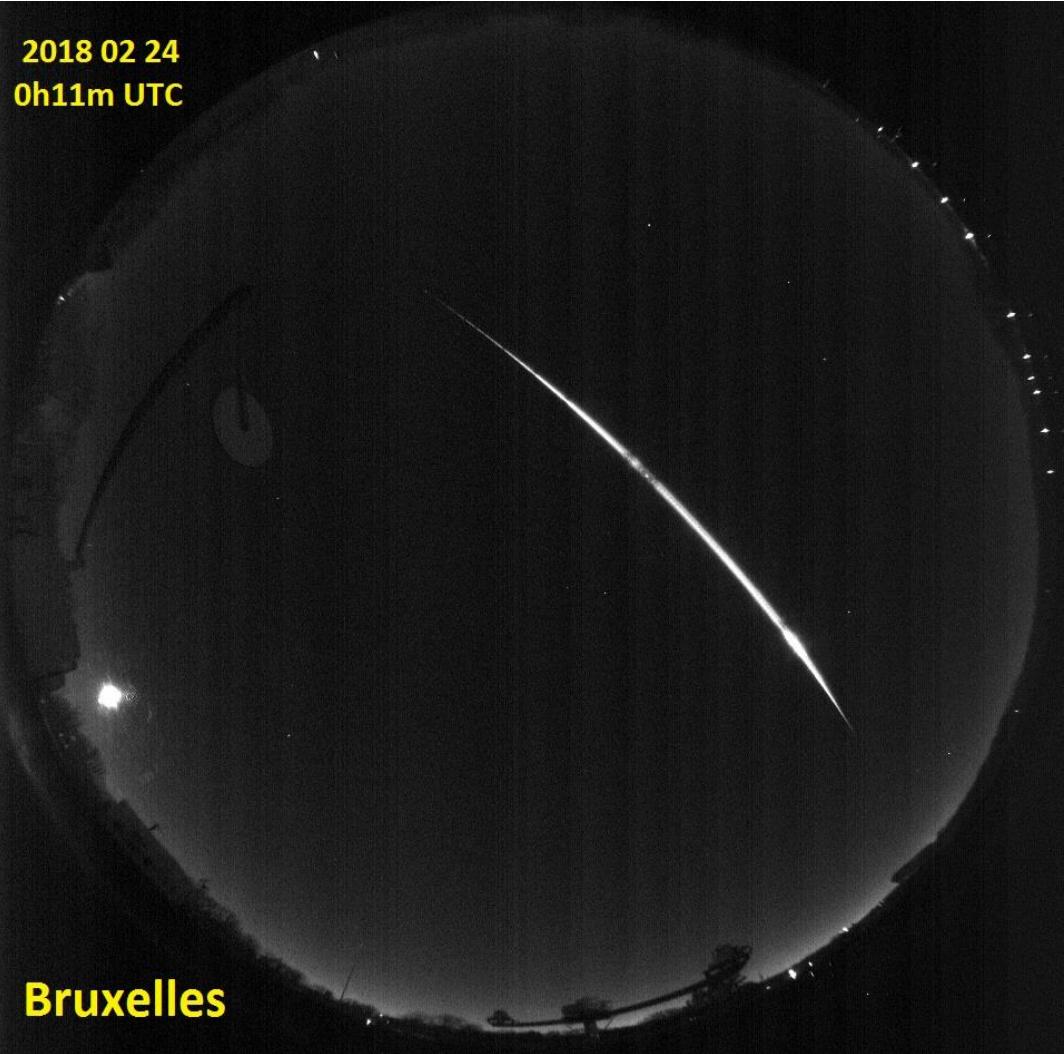

A blue box below it says "Votez pour la nature de la structure" with a "Tuto" link. It includes checkboxes for various types of structures and a "Je ne vois rien sur l'imagerie" option, with an "OK" button at the bottom.

On the right, there's a map view of a circular crater on the ground. A blue callout box points to the map with the text: "L'utilisateur peut sur la structure jouer avec le relief ombré et la transparence". A legend box titled "Calques" shows options for "Relief ombré" and "Transparence". Another blue box at the bottom left says "Apporter des données sur la structure" with a "Tuto" link.
